## REASONS FOR ALLOWANCE

This communication is responsive to the ELECTION OF SPECIES filed October 26, 2004.

Applicant's election without traverse of Species A in the reply filed on October 26, 2004 is acknowledged.

This application is in condition for allowance except for the presence of claims 13-69 drawn to species non-elected without traverse. Accordingly, claims 13-69 been cancelled.

Concerning applicants comments regarding claim 1 being generic, it is noted that the other embodiments do not require coupling means (e.g., 14, 15, 16). Therefore, the suggestion that claim 1 is not generic seems accurate and proper.

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Cancel claims 13-69.

The following is an examiner's statement of reasons for allowance:

Claim 1 recites the combination of an apparatus comprising a helix, a plurality of neighboring convolutions, a follower, means for rotating, a further part, and coupling means arranged to separably connect the further part to the first part except in at least one position of the second part relative to the first part. The aforementioned combination is not shown or taught by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Helck ('414) and Aschoff et al. ('850) disclose other apparatus for effecting relative movement having a helix. Broadbent discloses an apparatus having a latched release-bearing component.
